Python Syntax	Java Syntax
”Hello World”	System.out.printin(”Hello World”)

1 PYTHON

WHY I LOVE PYTHON

1. Python is the easiest language as it involves very little syntax
2. It is very user friendly
3. Jobs in python are completed much faster

1.1 Python vs Java

Python involves less syntax than java. Both sets of code would print out “Hello world”

1.2 HISTORY OF PYTHON

- Python was developed on February 20th ,1991by Guido van Rossum, a dutch programmer who apparently named python not after a snake but after a cartoon series
- The dutch man had originally started working on an abc programme which had the interfacing with amoeba operating system. He removed all the flaws of the abc programme and created a language that used less syntax

Figure 1: Guido Van Rossum, founder of python

1.3 Programs written in Python

Some of the greatest programs written are done with python: Google, Instagram, quora, dropbox and so on. The list is simply inexhaustible. There is no programming language quite like python.

1.4 INTEGRATED DEVELOPMENT ENVIRONMENT FOR PYTHON

Some of the integrated development environment for python include pycharm(which is what I use), Idle (which stands for integrated development and learning environment), Pydev, pyscripter and so on

1.5 Programming Languages Related to Python

Some of the programming languages related to python include Java(which you would have seen in one of the previous slides), javascript, c++

2 JAVA

- Java is an object -oriented programming language that was invented by a Canadian computer scientist who goes by the name james gosling. He created with some colleagues and a company called sun microsysytem in the year 1995.
- The language was actually evolved from another language referred to as oak

2.1 PROGRAMS THAT CAN BE WRITTEN WITH JAVA

- Examples of programs that can be written in java are web-based applications, mobile applications, desktop gui applications etc.
- Apps like twitter, opera mini , murex and spotify are apps that have been created with java.

2.2 INTEGRATED DEVELOPMENT ENVIRONMENT FOR JAVA

1. Eclipse
2. NetBeans
3. Jcreator
4. Xcode
5. Jdeveloper

Figure 2: James Gosling,The Founder of Java

2.3 PROGRAMMING LANGUAGES RELATED TO JAVA

- Python
- C++
- Haskell

3 HTML

- HTML stands for Hyper Text Markup Language
- It was created by sir tim berners lee in 1991. It was not released officially but released as html 2.0 in 1995
- The language was created for the main purpose of designing web pages

3.1 PROGRAMS WRITTEN IN HTML

HTML, when combined with JAVA and CSS is the basis for web development.

Figure 3: Tims Berner Lee, founder of HTML

Figure 4: HTML logo

3.2 INTEGRATED DEVELOPMENT ENVIRONMENT FOR HTML

- Pycharm
- Webstorm
- Eclipse
- Net Beans
- Atom

3.3 PROGRAMMING LANGUAGES RELATED TO HTML

- JAVA
- PHP
- JAVASCRIPT

4 C

- C is a Programming Language that was developed by American computer scientist, Dennis Ritchie in the early 1970s.
- It was devised as a system implementation language for the Nascent Unix Operating System

4.2 C LOGO

4.3 PROGRAMS DEVELOPED WITH C

- Mozilla Firefox
- Google
- OPERATING SYSTEMS (Infact the first Operating System developed with a high level programming language was developed with C. The programming language was unix)

4.4 INTEGRATED DEVELOPMENT ENVIRONMENT FOR C

- NetBEANS
- C LION
- XCode
- Code Lite
- Eclipse

4.1 Founder of C

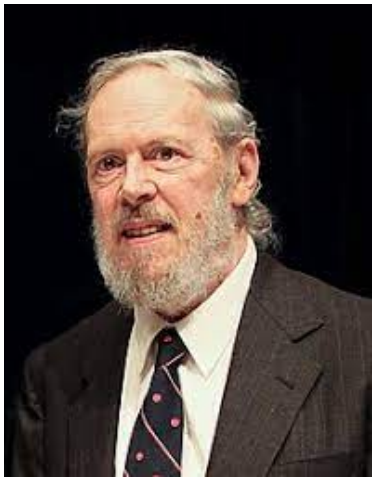

Figure 5: Dennis Ritchie,founder of c

Figure 6: C logo

Figure 7: Bjarne Stroustrup, founder of C++

4.5 PROGRAMMING LANGUAGES RELATED TO C

- C++
- Python
- Java
- Javascript
- Perl

5 C++

- C++ is A PROGRAMMING LANGUAGE DEVELOPED BY BJARNE STROUSTRUP, A DANISH COMPUTER SCIENTIST in 1979.
- IT WAS SETUP AS AN UPGRADE TO C.
- IT WAS PREVIOUSLY CALLED "C WITH CLASSES" BEFORE RENAMED TO C++ IN 1983

5.1 Founder of C++
